

PreventingCrashes Facilitator Notes
Kelly James
CONFIDENTIAL

Background (for facilitators only): Kelly James will quickly experience cardiac arrest within a clinic setting.

Supplies Required

<ul style="list-style-type: none">• Mock AED (in appropriate position)• Training Bag-valve-mask (in appropriate position)	<ul style="list-style-type: none">• CPR mannikin• sheet/cover for the mannikin
--	---

Background:

Kelly James is a 68 yo patient, seeing you for indigestion that started 30 min ago. S/he is quite worried about it. S/he has a history of COPD and GERD.

To start the scenario:

Have an actor (may be facilitator) in a clinic chair, being interviewed by a staff member. After 30 seconds, s/he should go unresponsive.

When the actor is let down to the ground, they retrieve the CPR mannikin, which is hidden under a sheet nearby.

Case Progression – Kelly James

Stage and Situation	First Responder Actions	Team Actions
<i>Recognize cardiac arrest</i>	<input type="checkbox"/> assess vitals <input type="checkbox"/> call for help <input type="checkbox"/> take charge <input type="checkbox"/> delegate CPR <input type="checkbox"/> delegate to call 911 <input type="checkbox"/> ask to retrieve AED, BVM, oxygen	<input type="checkbox"/> safely position patient on ground
<i>CPR underway</i>	<input type="checkbox"/> provide feedback to team <input type="checkbox"/> consider cause	<input type="checkbox"/> quality compressions <input type="checkbox"/> quality bagging <input type="checkbox"/> record events <input type="checkbox"/> apply AED when arrives <input type="checkbox"/> check glucometer
<i>Shock advised</i>	<input type="checkbox"/> ensure CPR is rapidly resumed	<input type="checkbox"/> deliver shock <input type="checkbox"/> switch off when fatigued
<i>EMS arrives</i>	<input type="checkbox"/> provide effective handover
